

# Prosthetic Technology RESEARCH

For Individuals with Lower Limb Amputation

Do you have a **leg amputation**, above the ankle and below the knee?  
Was your amputation more than 6 months ago?  
Are you between the ages of 22 and 70?

If you answered yes to all three of these questions, please consider calling our study coordinator to discuss your qualifications and participating in our lower limb research project.

Why are we doing this study? In this study researchers at the University of Pittsburgh are developing a device that stimulates nerves with the goal of producing sensations that feel like they come from the amputated limb.

What will I do in this research study? You will participate in three to four study visits for pre-surgical screening, one visit for electrode placement, testing visits over the course of 90 days, a visit for electrode removal, and a final follow-up visit with a study physician. You will be compensated \$50 for each visit you attend with the maximum compensation of \$3,300 for all study visits.

Please contact our study team at **412-648-4035** for more information.
